

# Extended System Protection Plan

Extend the value of your system with long-term system protection

The Extended System Protection Plan (ESPP) is a key component of the NEC service program, InProtect<sup>SM</sup>. InProtect is designed for customers who wish to protect their investment in NEC products with an extended component warranty plan.

NEC is known for setting innovative standards in communications system design and reliability. Now, with InProtect ESPP, NEC has established new benchmarks in system service and protection. By combining NEC's warranty program with its established reputation for reliable products, NEC offers one of the most complete technology investment solutions available in the industry today.

## Benefits of Protection

The Extended System Protection Plan offers the following significant benefits:

- Extends the standard new system hardware component warranty plan for an additional four years.
  - Creates a higher comfort level for new system buyers since service is based on direct manufacturer support and involvement.
  - Facilitates cost justification to management since products are protected for a longer period of time.
  - Provides manufacturer system hardware component protection.
  - Pre-payment for the extended warranty helps protect investment.
- Helps ensure replacement of NEC-specified quality parts by authorized NEC Associates.

Investment in an NEC communications system yields long-term benefits to your organization. Protect your investment with NEC's Extended System Protection Plan.
